

Yes. I went fairly deep into the **current Bangladesh market**, and I'm going to judge Softune as a **local e-commerce SaaS**, not as a generic website builder and not against international products.

I checked Softune itself plus the strongest visible local competitors, their current pricing/features/positioning, and broader Bangladesh e-commerce platform data. One important caveat: **there is no reliable public market-share dataset for local SaaS platforms specifically**, so rankings below are my competitive assessment, not an official market-share ranking.

My short verdict

Softune is genuinely competitive, but I would NOT currently rank it #1 in Bangladesh.

My current ranking for **local e-commerce SaaS/platforms** is:

Rank	Platform	My score	Best at
 1	Dukan	9.1/10	Overall BD merchant fit
 2	FrameX	8.9/10	Free acquisition + operations
 3	ZatiqEasy	8.7/10	Scale, existing ecosystem & traction
4	Softune	8.5/10	UX, themes, AI & product architecture
5	ShopZero	8.3/10	Managed modern commerce
6	Dukani	8.0/10	Simplicity & price
7	Storrea	7.5/10	Established local commerce presence

But here's the interesting part:

I think **Softune has one of the highest ceilings of all of them.**

If you execute the right things, I could realistically see Softune becoming **#1–#2**, because its product direction is different from simply copying the existing local SaaS model.

1. First: what Softune actually is

After analyzing the live site, Softune isn't merely:

"Create an ecommerce website."

Its current product is closer to:

A managed ecommerce operating system for small businesses, with storefronts + merchant dashboard + AI + themes + integrations + add-ons.

The current site exposes:

- Multiple storefront themes
- AI product-description generation
- AI theme customization
- Multi-store management
- Product/variant management
- Inventory
- Orders
- Analytics
- Local payments
- Local couriers
- Add-on marketplace
- Staff roles
- Loyalty
- WhatsApp/SMS
- Reviews
- Email marketing
- AI chatbot
- AI auto-reply
- AI ad copy
- AI forecasting
- Stock alerts
- Spam prevention
- Data export

That's actually a fairly ambitious product.

Softune currently advertises **26 native add-ons**, three main themes, AI-assisted theme editing, multi-store management, and CSV/PDF/JSON exports. 

And the pricing is:

- Starter — **₺950/mo**
- Growth — **₺2,390/mo**

- Business — **৳5,590/mo**
- Enterprise — custom

with 0% transaction fee advertised. 

That's important because Softune isn't competing as a cheap "website generator."

It's trying to compete as **commerce infrastructure**.

2. The biggest problem: Bangladesh is already crowded

This is where I would be brutally honest with you.

The local market isn't empty anymore.

You have:

Dukan

Dukan is probably your strongest direct competitor right now.

It offers:

- Free plan
- ৳499 Growth
- ৳999 Pro
- Local payment integrations
- Pathao
- Steadfast
- RedX
- Carrybee
- POS
- COD fraud prevention
- Facebook Pixel
- CAPI
- Google Tag Manager
- TikTok Pixel
- AI
- Themes
- Inventory
- Analytics

and claims **29 plugins + 17 themes + 4 courier integrations + 2 payment gateways**.

Its pricing is extremely aggressive:

Free → ₳499 → ₳999 → Enterprise.  Dukan Banglad...

That is a serious threat to Softune.

3. FrameX is another serious threat

FrameX is particularly dangerous from a customer-acquisition standpoint.

It offers a:

Lifetime Free plan

with:

- Unlimited products
- Unlimited templates
- Inventory
- Logistics automation
- Multiple websites
- Central store management
- Meta Ads
- AI
- Custom domains

The free plan has a 30-order/month limitation, while Pro is around ₳1,000/month and Business ₳2,500/month.  FrameX T...

It also aggressively positions:

- bKash
- Nagad
- SSLCommerz
- COD
- Pathao
- Steadfast
- RedX
- COD fraud checker
- Meta/TikTok server-side tracking

as core differentiators.  FrameX T...

This matters.

A Bangladeshi Facebook seller thinks:

"Why should I pay ₳950 when I can start free?"

That's a much more powerful acquisition argument than:

"Our AI theme editor is better."

4. ZatiqEasy is probably the biggest established player

ZatiqEasy is particularly difficult to compete against because it has **ecosystem/traction**, not just features.

Its current site claims:

- **100,000+ shops created**
- **3M+ orders generated**
- **50K+ happy customers**
- Tens of thousands of active shops

along with integrated commerce, shipping, inventory and payments. 

Its pricing starts at:

Free → ₳599 → ₳1,099 → ₳2,499

although its free plan has transaction fees, while paid physical-product plans advertise 0% transaction fees. 

And Zatiq has gone beyond software.

It has **Zatiq Capital**, where eligible sellers can access financing based on their sales performance. 

That's strategically important.

Because eventually the strongest ecommerce SaaS doesn't just say:

"Here is your website."

It says:

"We run your commerce infrastructure."

Zatiq is moving toward that.

5. Softune's biggest advantage: **PRODUCT QUALITY**

This is where I think Softune is stronger than its current ranking suggests.

Looking at the product architecture exposed through the website, Softune has a more **modern SaaS-product mindset** than many local competitors.

For example:

Softune's AI isn't just a chatbot

The site presents:

AI Suggest → colors, fonts, layout and copy

and allows merchants to review changes before applying them. 

That's much more interesting than:

"Ask AI anything."

You're making AI part of the **store-building workflow**.

That's the right direction.

6. Softune's theme system is also a strong differentiator

Softune currently presents:

- Aurora
- Bazaar
- Sweets/Mishthan
- Custom

and emphasizes switching between different storefront experiences. 

This is important.

A lot of local platforms effectively give you:

Pick template → change colors → add products.

Softune's positioning is closer to:

Pick an actual visual identity for your business.

That's much more valuable to fashion, beauty, food and lifestyle merchants.

7. Softune's add-on architecture is potentially **VERY** powerful

This might actually be one of your best strategic decisions.

Softune currently shows 26 add-ons including:

- Live Chat
- WhatsApp Alerts
- SMS
- Reviews
- Loyalty
- Recently Viewed
- Quick View
- Product Enquiry
- Compare
- Size Guide
- Discount Codes
- Email Marketing
- Referral
- Purchase Notification
- Wholesale Pricing
- Frequently Bought
- Review Reminder
- AI Chatbot
- AI Auto Reply
- AI Ad Copy
- AI Forecasting
- Staff Roles
- Stock Alerts
- Spam Prevention
- Catalog Export
- Product Badges

That's the beginning of an **app ecosystem**.

And this is where Softune could eventually become significantly more defensible.

8. Where Dukan beats Softune

This is where I wouldn't sugarcoat it.

Dukan currently has a stronger Bangladesh-specific proposition.

For example:

Softune:

AI + themes + dashboard + add-ons

Dukan:

bKash + courier + COD fraud + POS + Facebook + CAPI + AI + Bangla + free plan

For a typical Bangladeshi merchant, the second proposition is easier to understand.

Dukan is also substantially cheaper:

	Softune	Dukan
Entry	₹950	Free
Growth	₹2,390	₹499
Pro/business	₹5,590	₹999
Transaction fee	0%	0%
Courier	Yes	Yes
AI	Yes	Yes
Themes	Yes	Yes
Local operations	Good	Very strong

Dukan's current plans are publicly listed at Free, ₹499, ₹999 and custom enterprise.

 Dukan Banglad...

So Softune cannot win a pure price war.

Don't try.

9. Where FrameX beats Softune

FrameX has an even stronger acquisition hook:

Lifetime Free

Its free tier gives merchants a functioning store with unlimited product listing and multiple operational capabilities, although monthly orders are limited.  FrameX T...

And its messaging is extremely Bangladesh-specific.

It talks about:

- COD fraud
- Pathao
- Steadfast
- RedX
- Meta Ads
- TikTok tracking
- bKash
- Nagad

That is exactly what the Facebook-commerce merchant understands.

Softune currently feels more like a sophisticated SaaS.

FrameX currently feels more like a BD seller's business tool.

That's an important distinction.

10. Where Zatiq beats everybody

Distribution + trust + ecosystem.

100K+ stores is a huge psychological advantage if that number is representative of actual platform-created stores.  Zatiq E...

And Zatiq isn't only selling software.

It has:

- ecommerce
- logistics
- payments
- reselling

- merchant ecosystem
- financing

That's difficult to attack head-on.

You shouldn't try to become "another Zatiq."

11. Where Softune beats Zatiq

Product sophistication and brand direction.

Zatiq is trying to solve a massive commerce problem.

Softune can potentially build a more premium product.

I think your opportunity is:

Shopify-like product quality + Bangladesh-native commerce.

Not:

"Another Bangladeshi ecommerce builder."

That's a much better position.

12. ShopZero is interesting

ShopZero is one of the newer products worth watching.

Its current positioning includes:

- managed storefront
- merchant dashboard
- bKash
- SSLCommerz
- EPS
- Pathao
- RedX
- Steadfast
- eCourier
- Meta catalog
- Facebook Ads
- AI

- reporting
- theme editor
- backups
- multi-store

Its pricing is currently:

₺999 / ₺2,499 / ₺5,999. 

That's remarkably close to Softune.

So this is a **direct competitor**.

And ShopZero has an interesting positioning:

"Managed commerce."

Softune needs to be careful here.

13. Dukani is another direct competitor

Dukani's pricing:

- ₺499
- ₺999
- ₺1,999

and it advertises:

- 0% transaction fee
- custom domain
- product/order limits depending on plan
- staff
- push campaigns
- priority support. 

Again:

Softune is more expensive at every comparable level.

So Softune needs to justify the premium.

14. Storrea

Storrea is another local ecommerce platform and is not something I would ignore. Its terms identify **Storrea Limited as a Dhaka-based company** and describe the platform as an ecommerce platform for merchants. 

But compared with Dukan, FrameX, ZatiqEasy and Softune's current product direction, I don't think Storrea is the strongest immediate threat.

15. And then there's WooCommerce

This is the elephant in the room.

According to current Bangladesh technology-usage data, **WooCommerce represents about 91% of detected ecommerce technologies among .bd ecommerce websites** in one August 2026 dataset. 

Another dataset with a broader store population puts WooCommerce around **66%**, with custom platforms around 23% and Shopify around 6%. 

The exact percentages differ because the datasets use different methodologies.

But the conclusion is extremely clear:

Your biggest competitor isn't another SaaS.

It's:

WooCommerce + local developer

That is the real enemy.

Because a Bangladeshi merchant can think:

"I'll pay a developer ₳15,000–30,000 and get a website."

Instead of:

"I'll pay Softune every month."

16. My actual competitive map

I'd divide the market like this:

Tier A — serious competitors

Dukan
FrameX
ZatiqEasy
Softune
ShopZero

Tier B — relevant

Dukani
Storrea
other local ecommerce SaaS products

Tier C — indirect but extremely powerful

WooCommerce
Custom Laravel/Node/PHP websites

Tier D — alternative sales channels

Facebook/Instagram
Daraz

The latter aren't direct SaaS competitors, but they compete for the merchant's decision:

"Do I even need a website?"

17. My scorecard

Here's my more detailed assessment.

Category	Softune	Dukan	FrameX	ZatiqEasy	ShopZero
UX/Product quality	9.5	8.7	8.6	8.5	9.2
Visual storefronts	9.5	8.5	8.5	8.3	9.0
AI	9.3	8.5	8.7	7.8	8.8
Themes	9.4	8.7	9.0	8.3	8.8
Local payments	8.5	9.5	9.5	9.0	9.0

Category	Softune	Dukan	FrameX	ZatiqEasy	ShopZero
Courier ecosystem	8.5	9.5	9.5	9.0	9.0
COD/fraud tooling	8.0	9.5	9.5	8.5	8.0
Marketing tools	9.2	9.0	9.2	8.5	9.0
Multi-store	9.5	8.5	9.2	8.5	9.0
Add-on ecosystem	9.5	9.0	8.5	8.0	8.5
Pricing	7.5	9.5	9.5	9.2	8.5
Free acquisition	5.5	9.5	10	9.5	8.5
BD positioning	8.5	10	9.8	9.5	9.0
Premium positioning	9.5	8.0	8.0	8.0	9.0
Scalability potential	9.3	9.0	9.0	9.5	9.2

Overall:

Softune — 8.5

But notice something:

Softune scores extremely high in **product**, while competitors score higher in **distribution and local operational depth**.

That is the gap you need to close.

18. So is Softune better?

For a premium brand?

Yes.

I'd choose Softune over most local alternatives.

For a random Facebook seller who wants the cheapest possible store?

No.

Dukan/FrameX/Zatiq are currently stronger.

For a merchant who wants sophisticated storefronts + AI + multiple brands?

Softune is one of the strongest options.

For a large established merchant?

WooCommerce/custom development still has a huge advantage because of flexibility.

For a new merchant with almost no budget?

FrameX/Dukan/Zatiq have a better acquisition proposition.

19. The biggest mistake Softune could make

Trying to compete feature-for-feature.

If you respond to Dukan with:

"They have 29 plugins, so we'll build 40."

You're going in the wrong direction.

If FrameX says:

"Lifetime free."

and Softune responds:

"We'll reduce our price to ₺699."

You're also going in the wrong direction.

You'll end up in a race where everyone copies everyone.

20. Softune needs a different category

I would position Softune as:

The premium commerce platform for Bangladesh's growing brands.

Not:

"An ecommerce website builder."

That's too generic.

And not:

"Cheapest ecommerce platform."

You cannot win that.

Instead:

Softune should own:

Beautiful storefront + powerful commerce engine + AI + multi-brand management.

That's a much stronger category.

21. Your killer customer segment

Don't target "everyone."

Your best customers are probably:

Stage 1

Facebook/Instagram seller doing:

₹50k–₹5 lakh/month

who has outgrown:

Facebook page + Messenger + Google Sheet.

Stage 2

Brands doing:

₹5 lakh–₹30 lakh/month

who want:

- professional website
- better conversion
- analytics
- inventory
- marketing automation
- courier
- payments
- staff
- multiple campaigns

Stage 3

Agencies / entrepreneurs managing multiple brands.

This is where Softune's **multi-store capability** becomes very valuable. Softune already advertises up to three stores on the Business tier.  Softu...

22. The agency angle could be HUGE

This is actually one of my favorite things about Softune.

Your Business plan currently says:

"Built for teams managing multiple client storefronts."

That's strategically smart.  Softu...

Imagine an agency with:

20 clients

Instead of:

- 20 WordPress installations
- 20 hosting accounts
- 20 plugins
- 20 update cycles
- 20 backups
- 20 security problems

they get:

Softune Agency

One dashboard.

One billing system.

Multiple stores.

Reusable themes.

Reusable components.

Central management.

That's a completely different business model.

And I think this is more defensible than competing directly for individual merchants.

23. The one thing Softune needs badly: FREE ENTRY

This is probably my biggest recommendation.

I wouldn't necessarily make the entire platform free.

But I would introduce something like:

Softune Free

↳

- 10–20 products
- Softune subdomain
- 50 orders/month
- 1 theme
- basic dashboard
- basic analytics
- basic AI
- Softune branding
- no custom domain

Then:

Starter

↳499–↳699

Growth

↳1,499–↳1,999

Business

৳4,999–৳5,999

You don't need to be the cheapest.

You need to eliminate:

"Should I even try Softune?"

That's the biggest psychological barrier.

Dukan and FrameX already understand this.

24. Another major opportunity: COD

This is extremely important in Bangladesh.

Your platform should eventually know:

customer phone number → order history → delivery history → cancellation rate → suspicious behavior → COD risk.

Then show:

Customer Risk

Low Risk

or

Medium Risk

or

High Risk

before the merchant confirms the order.

FrameX and Dukan are already emphasizing COD fraud/risk tooling. 

Softune needs to be at least as good here.

25. Another opportunity: Facebook-first commerce

This is possibly the biggest product opportunity.

A huge number of Bangladeshi businesses are:

Facebook-first.

Don't tell them:

"Build your website."

Tell them:

"Turn your Facebook business into a complete store."

Imagine Softune automatically importing:

- Facebook page
- products
- images
- descriptions
- Messenger inquiries
- Meta Pixel
- catalog
- ad tracking

Then:

"Your Softune store is ready."

That is a much better onboarding story.

26. AI should eventually do this

Instead of:

"Generate product description."

Softune should eventually have:

"Build my store"

Merchant uploads:

Logo + 5 product images

AI generates:

- brand colors
- typography
- homepage
- product categories
- product descriptions
- banners
- navigation
- policies
- SEO metadata
- product variants
- homepage sections

Then:

Publish Store

That would be a genuine differentiator.

27. One concern about Softune's current website

The website is **very product-heavy**.

It tells me a lot about:

- AI
- themes
- dashboard
- add-ons
- analytics
- storage
- features

But the average Bangladeshi merchant doesn't wake up thinking:

"I need 26 add-ons."

They think:

"I sell on Facebook. I want a website that gets orders."

That's the messaging gap.

Your homepage should communicate this in **5 seconds**.

Something like:

Facebook business থেকে নিজের অনলাইন দোকান — 10 মিনিটে.

Then demonstrate:

Facebook → Softune → Website → Order → Payment → Courier

That is much more powerful.

28. My final ranking

If I were investing my own money into a Bangladesh ecommerce SaaS today:

 **1 — Dukan**

9.1/10

Best combination of price + Bangladesh-specific operations + acquisition + features.

 **2 — FrameX**

8.9/10

Extremely aggressive free acquisition model and excellent local operational positioning.

 **3 — ZatiqEasy**

8.7/10

Massive existing ecosystem and impressive merchant traction.

 **4 — Softune**

8.5/10

Best product/brand experience among the newer platforms, in my assessment.

But weaker today in:

- free acquisition
- local operational depth
- market traction
- brand awareness
- merchant network
- price competitiveness

5 — ShopZero

8.3/10

Very serious modern competitor with strong managed-commerce positioning.

ShopZ...

6 — Dukani

8.0/10

Very good price/value and simple proposition.

Duk...

7 — Storrea

7.5/10

Established local option but less compelling than the current top group.

But here's my real conclusion about Softune

I wouldn't tell you to abandon Softune. Quite the opposite.

I think the product has a **better long-term product foundation than its current #4 ranking suggests.**

The problem isn't that Softune is technically weak.

The problem is:

Dukan/FrameX/Zatiq are currently better at selling the idea to Bangladeshi merchants.

That's fixable.

And there is one particularly important distinction:

Dukan is trying to be the easiest ecommerce platform.

FrameX is trying to be the free ecommerce platform.

Zatiq is building a commerce ecosystem.

ShopZero is building managed commerce.

Softune should become:

The best-looking, smartest, most flexible commerce OS for Bangladesh's growing brands.

If you make **Facebook-first onboarding + excellent BD payments/couriers + COD intelligence + free entry + agency/multi-store infrastructure** your next priorities, I would expect Softune's competitive position to move from roughly **#4** → **#2**, with a credible path to **#1**.

And I would **not** compete on being cheaper than Dukan.

I'd compete on:

"Dukan gives you a store. Softune gives you a brand and the system to grow it."

That's a much stronger moat.

Softune

Dukan

FrameX Tech

ZatiqEasy

ShopZero
