

Yes. I checked the **current Softune site and Dukan Bangladesh** specifically, so this comparison is about the **Bangladesh market**, not the similarly named Dukan products operating in other countries.

Softune vs Dukan — Bangladesh

Area	Softune	Dukan	Winner
 Bangladesh focus	Very strong	Very strong	Tie
Store builder	Advanced visual theme editor	Ready themes	Softune
Themes	3+ and expanding	17 themes	Dukan
Theme customization	Colors, fonts, sections, copy + AI	Strong theme system	Softune
bKash	Yes	Yes	Tie
Nagad	Yes	Not currently listed	Softune
COD	Yes	Yes	Tie
Courier integration	Local couriers	4 couriers	Dukan
Product management	Yes	Yes	Tie
Order management	Yes	Yes	Tie
Analytics	Yes	More mature/deeper	Dukan
POS	Not prominent	Yes	Dukan
Inventory	Yes	Yes + POS	Dukan
Fraud/fake-order protection	Yes	Yes	Tie
AI assistant	Very strong	Yes	Softune
AI store/theme assistance	Yes	More limited	Softune
AI product copy	Yes	Yes	Tie

Area	Softune	Dukan	Winner
Add-on ecosystem	26 built-in add-ons	29 plugins	Rough tie
Marketing tools	Strong	Very strong	Dukan
SMS	Add-on	Yes	Tie
Facebook Pixel/CAPI	Need to verify depth	Yes	Dukan
TikTok Pixel	Need to verify	Yes	Dukan
Google Tag Manager	Need to verify	Yes	Dukan
Custom domain	Yes	Yes	Tie
SEO controls	Yes	Yes	Tie
Mobile management	Yes	Strong	Dukan
Pricing entry	৳950/mo	Free	Dukan
Growth pricing	৳2,390/mo	৳499/mo	Dukan
Transaction fee	0%	0%	Tie
Free plan	No comparable free tier	50 orders/month	Dukan
Enterprise/custom	Yes	Yes	Tie
Product limits	50 / 500 / unlimited	Unlimited even on Starter	Dukan
Branding / modern UX	Very strong	Strong	Softune
Overall maturity	Newer	More established	Dukan

Softune currently advertises its AI assistant, theme editor, 26 add-ons, bKash/Nagad/COD, analytics and 0% transaction fee. Its plans are ৳950, ৳2,390 and ৳5,590/month. [Softu...](#)

Dukan advertises 29 plugins, 17 themes, four courier integrations, bKash + SSLCommerz, POS, inventory, analytics, fraud protection and AI. Its free plan allows 50 orders/month, while Growth is ৳499/month and Pro is ৳999/month. [Dukan Banglad...](#)

1. The biggest difference: positioning

This is where I think **Softune is actually more interesting than Dukan**, despite Dukan currently being the stronger product overall.

Dukan's positioning

Dukan essentially says:

"Everything you need to run your online business."

It is becoming an **e-commerce operating system**.

Store → products → orders → inventory → POS → courier → payment → marketing → analytics.

That's a very strong proposition.

Dukan even claims **15,000+ active stores and 50 lakh+ completed orders** on its login page.  Dukan Banglad...

That gives it a major trust advantage.

Softune's positioning

Softune is closer to:

"Build a beautiful online store and run it intelligently with AI."

That's different.

Softune's strongest differentiators are:

- AI assistant
- AI theme editor
- Multiple storefront themes
- AI product copy
- Add-on marketplace
- Bangladesh-native payments
- Bangladesh-native delivery
- 0% transaction fees
- Modern storefront experience

The site explicitly positions the AI assistant as something that understands the merchant's actual products, orders and sales—not merely a generic chatbot.  Softu...

That is a better product story than simply saying "we have AI."

2. Store design: Softune wins

This is probably Softune's biggest visible advantage.

Softune gives merchants a real theme editor where they can change:

- colors
- fonts
- sections
- copy
- desktop/mobile presentation

and has AI assistance for the design direction.  Softu...

That's much closer to the **Shopify-style storefront-building experience**.

Dukan has **17 themes**, which is objectively a lot more than Softune's currently advertised three themes.  Dukan Banglad...

But quantity isn't everything.

My assessment:

Dukan: 9/10 for theme variety

Softune: 9/10 for customization/design experience

If Softune can eventually reach 10–20 genuinely high-quality themes, I would give Softune the advantage.

3. Payments: Softune has an important BD advantage

Softune explicitly supports:

bKash + Nagad + COD + payment gateways.  Softu...

Dukan currently advertises:

bKash + SSLCommerz + COD.  Dukan Banglad...

For Bangladesh, **Nagad matters**.

So if your target customer is:

Facebook seller → small merchant → home business → Bangladeshi customer

then Softune's payment proposition is arguably more immediately attractive.

Winner: Softune

But Dukan has the advantage if the merchant wants a broader established payment infrastructure.

4. Courier: Dukan wins

Dukan currently advertises:

- Pathao
- Steadfast
- RedX
- Carrybee

directly from the platform.  Dukan Banglad...

This is a big deal.

For Bangladeshi merchants, courier automation isn't a "nice feature."

It's core infrastructure.

Softune needs to make its courier integrations equally obvious and competitive.

Winner: Dukan

5. AI: Softune wins

This is where I'd push Softune much harder.

Dukan has **Dukan AI**, including Bengali/English/Banglish assistance and image-to-product-copy functionality.  Dukan Banglad...

That's good.

But Softune is presenting AI as something integrated throughout the merchant experience:

- AI assistant
- AI theme editor
- AI product descriptions

- AI chatbot
- AI auto-reply
- AI ad copy
- AI forecasting

and its marketplace currently lists these capabilities among 26 add-ons. 

That's a much more interesting direction.

Winner: Softune

But here's the important warning:

AI isn't a moat anymore.

If Dukan copies every AI feature in 6 months, the advantage disappears.

Softune needs to build AI workflows that are deeply connected to merchant data.

For example:

"My sales dropped 23% this week. Why?"

AI should inspect:

- traffic
- products
- conversion
- abandoned carts
- inventory
- campaigns
- orders

and give an actionable answer.

That's a moat.

6. Operations: Dukan destroys Softune here

This is where I would not pretend Softune is currently ahead.

Dukan has:

- inventory
- POS
- courier booking

- delivery tracking
- analytics
- profit/loss
- marketing
- order management
- fraud prevention

and other operational tooling.  Dukan Banglad...

Softune is currently much more focused around:

storefront + ecommerce management + AI + extensions.

So if I were a merchant with:

| 1,000 orders/month + physical shop + warehouse + staff

I'd probably choose **Dukan today**.

If I'm:

| Facebook seller + small brand + home business + 50–300 products

I'd seriously consider **Softune**.

7. Pricing is Dukan's biggest weapon

This is probably the most dangerous part for Softune.

Softune

Plan	Price
Starter	₹950
Growth	₹2,390
Business	₹5,590

 Softu...

Dukan

Plan	Price
Starter	Free
Growth	৳499
Pro	৳999
Enterprise	Custom

 Dukan Banglad...

That's a **massive difference**.

A Bangladeshi Facebook seller asking:

"Why should I pay ৳950/month when Dukan gives me a free plan?"

is a completely legitimate objection.

And this is probably Softune's biggest commercial weakness right now.

8. But Softune has one pricing advantage

Softune has:

0% transaction fee

on every plan.  Softu...

That's good.

However, Dukan also advertises no hidden fees and its plans don't show a transaction fee.

 Dukan Banglad...

So don't make 0% transaction fees your primary competitive advantage.

It's becoming table stakes.

9. Product limits: Dukan wins badly

Softune:

Starter → 50 products

Growth → 500

Business → unlimited

 Softu...

Dukan:

Starter → unlimited products

Growth → unlimited

Pro → unlimited

 Dukan Banglad...

This is an area where I'd seriously reconsider Softune's pricing structure.

A small merchant may have:

70 products

and suddenly Softune's Starter isn't enough.

That's unnecessary friction.

My scoring

For the **Bangladesh market specifically**:

Category	Softune	Dukan
Storefront	9.0	8.5
Design/customization	9.2	8.5
AI	9.5	8.5
Payments	9.0	8.5
Courier	7.5	9.5
Inventory	7.5	9.5
POS	5.5	9.5
Analytics	8.0	9.0

Category	Softune	Dukan
Marketing	8.5	9.0
Add-ons	9.0	9.0
Mobile management	8.5	9.0
Pricing	6.0	10
Beginner friendliness	8.5	9.5
Brand/design quality	9.5	8.5
Current market maturity	6.5	9.5

Overall

Dukan: 9.0/10

Softune: 8.2/10

But here's the interesting part:

Product potential

Softune: 9.3/10

Dukan: 9.1/10

Why?

Because Softune is younger and has a more differentiated direction around **AI + storefront experience + extensibility**.

So which one would I choose?

If I'm a merchant TODAY:

Dukan.

It's cheaper, has a free plan, more courier integrations, POS, deeper operational functionality and an apparent installed base of 15,000+ active stores.  Dukan Banglad...

That's the honest answer.

If I'm building a new SaaS to compete against Dukan:

I'd rather build Softune's strategy.

Because competing with Dukan feature-for-feature is a terrible strategy.

You don't want:

Dukan but slightly cheaper.

You want:

The smartest ecommerce platform for Bangladesh's social-commerce sellers.

That's a much better position.

And here's what I would change in Softune

This is the part I'd take seriously if you're trying to make Softune win.

1. Introduce a REAL free plan

I'd seriously consider:

Free

৳0

- 25–50 products
- 50 orders/month
- Softune subdomain
- 1 theme
- basic analytics
- COD
- basic AI

Then:

Starter

৳499

Then:

Growth

৳999

Then:

Business

৳2,499–2,999

Your current ৳950 → ৳2,390 → ৳5,590 structure puts you at a disadvantage against Dukan before the merchant even sees your product.

2. Make "Facebook seller → website" your killer use case

Don't market Softune simply as:

Ecommerce platform.

That's too broad.

Your strongest customer is probably:

Facebook/Instagram seller → needs professional store → doesn't know WordPress → doesn't want developer → wants bKash/Nagad/COD → wants courier automation.

Own that segment.

3. Build the best 1-page funnel builder in Bangladesh

This is a major opportunity.

A seller should be able to say:

"I want to sell this product."

Softune generates:

Product → Landing page → Offer → Checkout → bKash/Nagad/COD → Courier → Order confirmation

That is much more directly tied to how many Bangladeshi social-commerce businesses actually sell.

4. Go extremely hard on AI

Not generic AI.

Make Softune understand the business.

Imagine:

"Ask Softune"

Merchant:

"Which product should I promote this week?"

Softune:

"Your Black Panjabi has the highest conversion rate but your inventory is low. Your second-best product is..."

That's much more valuable than:

"Write a product description."

5. Don't chase Dukan's POS immediately

This is important.

If you have limited engineering resources, **don't spend the next year rebuilding everything Dukan has.**

Instead:

Softune moat

AI + Social Commerce + Storefront + Marketing Automation

Dukan moat

Commerce Operations + POS + Inventory + Delivery

Those are different battles.

Final verdict

If we're talking **August 2026 Bangladesh market:**

 **Dukan — Current winner**

More mature, cheaper, stronger operations, better courier/POS infrastructure, and apparently a much larger installed base.  Dukan Banglad... +1

Softune — More differentiated challenger

Better visual/store-building direction, stronger AI positioning, strong Bangladesh-native payments, and a potentially better experience for modern small/social-commerce sellers.

 Softu...

But Softune's biggest problem isn't technology. It's pricing + market penetration.

If you can solve **distribution + trust + free entry + social-commerce specialization**, I would not try to become "another Dukan."

I'd make Softune the platform that a Bangladeshi Facebook seller thinks of when they say:

"I sell on Facebook. I need my own professional store."

That's a much sharper market position.
